To whom it might concern

It is my pleasure to recommend Joseph Caristena as high tech programme and project manager for innovative cutting edge technology initiatives.

As you know, Joseph Caristena has already managed many other successful programmes like "ExeForm" since 2002 and other web oriented awarded platforms and digital architectures for private companies and Governments at all levels and he handled these assigned projects on time, slightly under budget and with no major obstacles.

Joseph Caristena is highly respected by his colleagues and skillfully managed the plethora of personalities involved with his last project. His enthusiastic, optimistic attitude is contagious and serves to motivate his project staff. He is a team builder and leader who has the gift of identifying each staff member's primary talents and bringing out the best in each one throughout the course of the entire project. He has superb problem-setting and problem-solving skills.

Joseph Caristena is also a very calm and reserved under pressure and he deeply knows the stress management strategies to be implemented in teams in all kind of critical situations.

Joseph Caristena and his team designed two robots called Heron v2018 and Heron v2020 (a six legged robot) and he shared the 3D files of these robots to enhance the development stage of the new version for the robotic sector of BabaCAD called BabaCAD Robotics 2021.

His sharp sharing experience demonstrated an ability to quickly handle the turbulent information flow of open data (and all its critical factors) and determine which was relevant to the project and should be used and which was irrelevant and could be discarded.

Joseph Caristena shared his knowledge about the robot aesthetics and technology that can improve prototypes models bringing them from prototype stage to scale production stage, adding innovation and competitiveness at the highest level on the whole value chain of the project.

The excellent support provided by him and by his staff in the development of the robotic version of BabaCAD called BabaCAD Robotics 2021 was of an endless value.

As a software and robotic engineer with over twenty years of experience and also the author of BabaCAD Robotics and BabaCAD, the software that received the best reviews among critics and which was downloaded over 200,000 times from users around the world since June 2012, I find myself relevant to evaluate Joseph Caristena as a true professional and I am happy to recommend him in a hope that your organisation will seriously consider him for future tasks.

Sincerely
Mirza Coralic dipl.el.ing.
